Biological Control Program

The Bonner County Noxious Weeds Department can obtain biological control agents for the following noxious weeds: **Spotted knapweed**, **St. Johnswort**, and **Dalmation toadflax**. Call or email us at any point during the year to reserve your bugs of choice at no charge.

While Biological Control is a great tool for noxious weeds management, especially in difficult to access areas, it is a method that takes a period of several years to see results and eradication is typically NOT achieved.
